

T-1000 RODDING MACHINE FOR SEWERAGE CLEANING

Designed for performing the heaviest works during rodding cleaning of drain and sewerage systems. An independent combustion engine drives the working tool through elastically connected steel rods. Appliance of this system ensures transfer of large torque indispensable for heavy tasks.

T-1000 RODDER

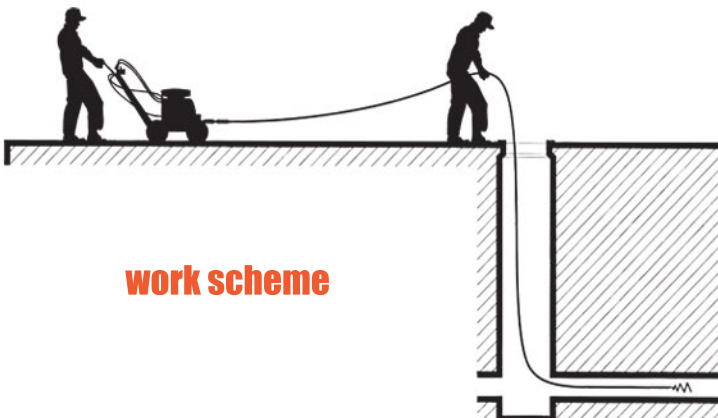

The unit includes following parts:

- 30m of rods in 1,5m sections
- three different working tools
- a working tool connection, a pin, a knob, a rod connection, a rod disconnection key, special gloves for rod operators

T-1000 drive unit surpasses previous systems thanks to applied technical solutions, in particular:

- smooth regulation of rpm and starting torque
- simple handling using just a single lever
- possibility of lowering the stress in rods
- instant working tool overload protection
- constant control of the working unit
- steering accessible for the operator
- precise steering

Most important features:

- useful for removing solid pluggage
- usable in any weather conditions
- hydraulic steering system
- does not use water
- lightness
